

COVID-19
SAFEHEAT - 5 DAYS !
MODANE - FRANCE

HEAT - JUNE 13, 14, 15, 16, 17

This **Hostile Environment Awareness Training (HEAT)** has been designed to support experienced Aid Workers and provide them with a more in-depth look at how to navigate risks in **High Threat Environments (HTEs)**:

- More tools to operate in HTEs;
- More skills to mitigate likelihood and impact of risks in HTEs;
- More exposure to real-life situations.

OSC's HEAT: training designed for aid workers by aid workers with recent field experience.

Uniquely among HEATS, our simulations have been designed by a complementary team of aid workers and security professionals to ensure that our simulations relate to actual fieldwork and are as realistic as possible. Our HEATs are structured around a scenario that allows exploring themes through theory and practice. Participants will work on skills and tools based on the sector best practices. They will hone their access negotiation skills based on actual events.

The range of skills participants acquire are non-pareil, from First Aid and TECC certifications to advance driving techniques. OSC's HEATs last 5 days, including 4 nights, and are designed for up to 16 trainees.
